Serve your country as a fire protection engineer. Sign up with USAJOBS.gov today to receive alerts about job openings.

US Government fire protection engineers are the decision makers for the protection of life and property and business continuity of the federal government.

Use your knowledge of fire protection engineering and fire dynamics to perform work such as:

- Building code interpretation and enforcement
- Design and/or review of fire protection systems and means of egress
- Inspection and commissioning of fire alarm, sprinkler, and passive fire protection systems
- Research and development of fire protection technologies
- Fire hazard analysis and fire inspections in occupied facilities
- Fire drills and emergency evacuation preparedness
- Post fire incident investigations

Below are examples of Government agencies that currently employ fire protection engineers:
