Alpha-port Inc, a small business, woman owned aerospace and defense contractor in the northern Ohio area, is looking to employ a certified Fire Protection Engineer for some temporary consulting work supporting Dept of Energy's Nevada National Security Site (NNSS), north of Las Vegas Nevada. The task would involve a several week review and independent assessment (Baseline Needs Assessment) of the on site fire protection and emergency response organization against DOE, NFPA and 10 CFR 851 requirements, to include, capabilities, staffing, equipment, training, mutual aid agreements, and ability to respond. This Baseline Needs Assessment (BNA) in the past, has been accomplished by the onsite Fire Marshall, but because of contract changes in the base operations contract, the NNSS Fire Chief desires to have an outside independent expert do the assessment. The task will involve some remote, offsite pre work planning and review of documentation and requirements; on site review of actual fire and emergency response operations, capabilities, and personnel; and remote, offsite development of a final independent assessment report- total time estimated as 3-4 weeks. Travel expenses will be reimbursed in accordance with standard government travel regulations. In order to meet DOE small business contracting goals, the work will be done through Alpha-port Inc.
