Property Risk Consultant – Baltimore, MD/Washington DC area

In a world ever more complex and unpredictable, large and corporate companies need a strong partner to improve their risk profile. AXA XL Risk Consulting is a division of AXA XL Insurance and supports:
· Underwriters, in the assessment of the risks AXA XL is insuring; and
· Clients, in the identification, evaluation, anticipation, and prevention of their risks.

Leveraging quality of our engineering expertise and our long-standing experience across multiple industry sectors, we have an ambition to develop innovative and new risk engineering approaches, dedicated risk modelling tools across multiple risk domains, and proprietary platforms and IT solutions for our clients. We serve all type of mid-market and corporate businesses, whether they are insured or not insured by AXA XL.

AXA XL Risk Consulting, relying on its international network of more than 400 risk consultants, located in more than 25 countries, speaking more than 20 languages, today serves globally more than 2,000 clients from various industry sectors.

This position will provide consulting services for property and natural hazards in the US. The position requires application of strong technical background and practical experience to identify and mitigate property and Nat Cat risk exposures for a broad range of project types and customers.

What will your essential responsibilities include?
- Conduct onsite visits to assess property and Nat Cat exposures and develop detailed reports to relay conditions and provide recommendations for improvement.
- Work hand in hand with the network of specialized engineers of AXA XL Risk Consulting to serve clients.
- Build credibility with and create customer satisfaction by demonstrating the value of risk control services.
- This position will service U.S. territories and support insured and non-insured clients. Travel is anticipated to be 25-30%.

You will report to the New York Regional Leader – North America.

We’re looking for someone who has these abilities and skills:
- Strong working knowledge of NFPA Codes, FM Data Sheets and local requirements.
- Strong working knowledge of fire protection or willingness to learn.
- Ability to apply industry experience to a broad range of customers and projects, consult effectively on a broad range of property risk controls, and identify exposures/assess controls on complex risks is required.
- Strong verbal and written communication skills are essential. Communicates effectively with broad range of underwriting and customer partners. The successful candidate will listen effectively and make sound assessments/conclusions based on review of written procedures, documents, discussions, and observations.
- Makes technical information and recommendations understandable to a broad range of audiences. Communicates in a manner that influences others to accept and act on recommendations.
- The successful candidate will be a self-starter, continually looking towards individual development. Must be capable of managing their schedule and resources, continually assessing workload considering business priorities, and directing their own efforts accordingly while working in a remote work environment.
- Work collaboratively as part of a team, proactively across lines of business, and effectively with internal and external partners on special projects and furthering industry and business goals.
- Valid driver’s license required.
