Want to be part of something big? As an intern at the National Fire Protection Association, you are able to contribute to many exciting projects throughout the organization, working to improve building, fire and life safety as well as insight into the standards development process. You get to see firsthand how we have a key role in keeping first responders safe, helping to provide designers and engineers with guidelines for building safety and providing educational materials to the public. Interns at NFPA get to work with and learn from some of the brightest minds in the fire protection and engineering industries and are able to apply learnings to work in the classroom as well as to their future careers.

A Little Bit About You:

- You are currently enrolled in an Engineering Program that will lead to a Bachelor’s and/or Master’s degree in engineering, or other technical specialty.
- You are positively curious about the world of Engineering and eager to take in as much information and knowledge as possible to apply to your future coursework and career.
- You are a team player and are engaging and encouraging in group work, while you can hold your own when working solo.
- You have a positive attitude and ready to jump in and help with a diverse, multitude of assignments.

The Nitty Gritty – aka, the pretty awesome stuff you’ll be doing:

- Assist the Technical Services team in the development, review and maintenance of various projects that supporting the technical needs of the Association.
- Assigned projects vary in complexity and offer the opportunity to work with technical staff of all levels across the engineering division as well as other project managers in teams or independently.
- Gain exposure to the hundreds of NFPA codes and standards and the standards development process.
