Where you fit in at Campbell Code Consulting

You will be the primary point of contact for clients on numerous projects and will be responsible for understanding client expectations and meeting them. You will have a team of engineers and consultants who can support you with drawing reviews, code research, and other technical tasks. At times, you may need to perform technical work yourself, but the ideal situation is for junior staff on the team to perform the technical work while you provide oversight. You will be responsible for the overall quality and accuracy of the work sent to the client, whether performed by you or by other engineers working on your projects. You will have the assistance of our operations team for scheduling, document handling, invoicing, and other administrative tasks.

What You'll Be Doing

Campbell Code Consulting

- Serving as the project manager and primary point of contact for numerous fire protection design projects
- Attending meetings with clients to answer technical questions and provide consulting advice
- Providing written email responses to client questions
- Designing fire protection systems in Autodesk Revit
- Preparing fire protection specification sections
- Attending occasional site visits before and during construction
- Cultivating long-term client relationships that lead to repeat work for the firm
- Preparing proposals for new work opportunities
- Overseeing the overall progress of your projects to meet client expectations and our firm financial goals
